

EDUCATION

Carnegie Mellon University , Pittsburgh, PA	December 2027
Masters of Artificial Innovation Engineering – Information Security	
University of Texas at Dallas , Richardson, TX	May 2027
Bachelor of Computer Science	GPA: 4.0/4.0
Coursework: Cyber Defense Lab, Database Systems, Adv. Algorithms, Data Structures & Algorithms, Operating Systems, Computer Networks, Unix	

SKILLS

Languages: Java, Python, C#, C++ | **Security:** MITRE ATT&CK, Penetration Testing, Malware Analysis, Data Security | **Tools:** Wireshark, Metasploit, MongoDB, SQL, Linux | **Development:** React, JavaScript, APIs, Database Design

EXPERIENCE

Developer - Break Through Tech AI/ML Cohort, Cornell Tech	May 2025 – Present
- Earned the Machine Learning Certificate – eCornell (Cornell University) by completing foundational coursework on machine learning taught by Cornell professors, covering core ML concepts and techniques. - Partnering with Cadence on an applied AI/ML project to build a dashboard that applies sentiment analysis and feature extraction to an Amazon Reviews dataset of over 500 million data points, highlighting top-rated product features.	
Undergraduate Researcher in Systems Security Lab – UT Dallas	August 2024 – Present
- Contributing to the development of attack pathway detection techniques by analyzing network files, IP events, and process activity to identify malicious behavior patterns. - Designed and implemented 6 variations of a process-prioritizing tracking strategy using C#. Additionally, built a database system to aggregate and query event counts of 1,700+ events using MongoDB, SQL, and C# for efficient data analysis. - Integrated and adapted the MAGIC anomaly detection model for malware identification on a network graph, customizing the pipeline for compatibility with the lab's proprietary dataset.	

PROJECTS

Developer – ECHO 911 Winner (1st place), Breaking Barriers Hackathon (AWS, AT&T, Deloitte)	September 2025- September 2025
- Built a real-time dispatcher dashboard using React (frontend) and Python (backend) to display 911 calls transcripts, display policies to follow on scene, and support dispatcher decision-making. - Leveraged AWS services (Connect, Lambda, Bedrock, Strands, S3, Polly) to transcribe calls, extract key details, and evaluate incident severity. - Integrated OpenStreetMap API, Open-Meteo API, Amazon Bedrock, and Claude Sonnet to enrich emergency location data and automate first responder mapping.	
Machine Learning Researcher – Solventum Collaborative Project	January 2025– Present
- Applying data preprocessing, model training, and hyperparameter tuning to large proprietary datasets. - Experimenting with 11 machine learning models (including traditional classifiers and deep learning architectures) to identify the best-performing approaches. - Collaborating with cross-functional teams of engineers and managers to translate technical insights into actionable recommendations.	
Backend Developer – Women Who Compute	August 2024 – January 2025
- Integrated backend services with MongoDB to enable efficient data storage and retrieval of over 65 member records. - Implemented access control methodologies for secure role-based permissions (admin page access limited to officers). - Built 3 features to track and manage member data, supporting organizational growth and improving efficiency by 35%.	
Developer - Coordination App for Wellness Center for Older Adults	August 2024 – January 2025
- Developed a full-stack coordination application in 2 week sprints for a wellness center to streamline service scheduling. - Built the frontend using React, Tailwind CSS, and JavaScript, enhancing user experience with an intuitive interface. - Designed and implemented Docker containers to streamline deployment, ensuring consistency and scalability across development environments and OAuth for authorization.	
Developer - React-Based Insurance Chatbot (HackUTD Project)	November 2023 – November 2023
- Developed a website using React, CSS, and JavaScript to provide an interactive chatbot interface where users can enter information about their insurance claims. - Integrated the OpenAI API to analyze claim data and generate insights about the probability of fraud. - Built a backend service using Python Flask to handle API requests, process data, and serve predictions, effectively connecting the React frontend with the OpenAI-powered backend. Enabled seamless communication between frontend and backend to deliver real-time fraud risk assessments to insurance companies, improving claim evaluation efficiency.	

LEADERSHIP

- Vice President – Women in Cybersecurity (WiCyS, UTD) | Aug 2024 – Present | Lead 12 officers and organize events for 65 members.
- Consultant – 180 Degrees Consulting, UTD Chapter | Aug 2024 – Present | Provide consulting for nonprofit organizations.
- Research Team Lead – ACM, UTD Chapter | Jan 2024 – Aug 2024 | Directed a 5-person research team on a machine learning project.

ACCOMPLISHMENTS & CERTIFICATES

- 1st place out of 36 teams at the Breaking Barriers Hackathon hosted by AWS, AT&T, and Deloitte
- Received 1st place at a beginner-friendly AI themed hackathon called AIFAHacks.
